

MATH 141: Final Exam
Fall — 2025
12/08/2025
150 Minutes

Name: _____

Write your name on the appropriate line on the exam cover sheet. This exam contains 19 pages (including this cover page) and 15 questions. Check that you have every page of the exam. Answer the questions in the spaces provided. Be sure to follow instructions, answer every question completely, and show all your work.

*'Twas the night before Christmas, all frozen and still,
Santa is working hard, but Math makes him quite ill.
The sleigh is loaded, and the reindeer are prepared,
But with problems unsolved, no gifts can be shared.*

*"These problems are hard!", Santa cried out in fright.
"It's clear all my derivatives and sums aren't right!"
This math needs to be done before Santa can take flight,
He'll need a Calculus ace to help Save Christmas tonight!*

1. (8 points) *On the brink of his flight, Santa is overcome with dismay,
For he'd forgotten his derivatives, quick, he needs help right away!*

Find each of the following:

(a) $\frac{d}{dx} (\cot x) =$

(b) $\frac{d}{dx} (\ln x) =$

(c) $\frac{d}{dx} (\sec^{-1} x) =$

(d) $\frac{d}{dx} (\sec x) =$

(e) $\frac{d}{dx} (\sin^{-1} x) =$

(f) $\frac{d}{dx} (\tan x) =$

(g) $\frac{d}{dx} (\tan^{-1} x) =$

(h) $\frac{d}{dx} (\csc x) =$

2. (8 points) *Asked if he knew his derivatives, Santa sat in silence, thinking it through.*

He shouted “67!”. The elves let out a groan, “Okay, so we’re not passing you.”

Showing all your work, compute the following derivatives—*do not simplify your answer*:

(a) $\frac{d}{dx} (\sqrt{x^5} \arctan(2x))$

(b) $\frac{d}{dx} \left(\frac{\tan(8x)}{\ln x} \right)$

(c) $\frac{d}{dx} (\sec^2(x^3))$

3. (8 points) *Though Rudolph's red nose shone brightly, it dims at the limits ahead,
Santa needs help! Quick, compute these limits or Christmas could be dead!*

Showing all your work, compute the limits below. **You may not use l'Hôpital's rule.**

(a) $\lim_{x \rightarrow 9^-} \frac{x - 5}{x - 9}$

(b) $\lim_{x \rightarrow 2} \frac{\frac{1}{x} - \frac{1}{2}}{x - 2}$

(c) $\lim_{x \rightarrow \infty} \frac{16x^3 + 1}{9 - 4x^3}$

(d) $\lim_{x \rightarrow 9} \frac{x - 9}{3 - \sqrt{x}}$

4. (8 points) *Five golden rings, four calling birds, three French hens,
Two turtle doves, and a partridge in a pear tree!
... but they were all of them deceived for another ring was made.*

Let $g(x) = \int_0^x f(t) dt$. Use the plot of $f(t)$ above to answer the following questions:

(a) $g(2)$

(b) $g(4)$

(c) $g'(4)$

(d) $g''(2)$

5. (8 points) *All through the night, ole Santa worked hard—pressing on with cheer.
Suddenly, Santa froze and gasped. He'd forgotten his integrals this year!*

Find each of the following:

(a) $\int \tan x \, dx =$

(b) $\int \csc^2 x \, dx =$

(c) $\int \frac{1}{x} \, dx =$

(d) $\int \sec x \, dx =$

(e) $\int \frac{dx}{1+x^2} =$

(f) $\int \cot x \, dx =$

(g) $\int \csc x \, dx =$

(h) $\int \sin x \, dx =$

6. (8 points) *What Santa knew about continuity wasn't quite true.*

Turns out, he's gonna need some help making it through!

A function $f(x)$ is given below.

$$f(x) = \begin{cases} x + 2, & x < 1 \\ 4 - x^2, & x \geq 1 \end{cases}$$

- (a) Write an equation that would express the fact that $f(x)$ is continuous at $x = 1$.
- (b) Determine whether $f(x)$ is actually continuous at $x = 1$. Explain why or why not in terms of the equation you wrote in (a).

7. (8 points) *“These limits!” cried Santa. “I can’t manage them all.”*
“Turns out, I’m no good with l’Hôpital!”

Showing all your work, **use l’Hôpital’s rule** (along with any necessary algebra or ‘tricks’) to compute the following limits:

(a) $\lim_{x \rightarrow 0} \frac{6x}{\sin(7x)}$

(b) $\lim_{x \rightarrow \infty} \frac{\sqrt{x}}{\ln x}$

(c) $\lim_{x \rightarrow 0} (1 - 2x)^{1/x}$

8. (8 points) *For the naughtiest students, Krampus brought integrals to fear,
“Solve these quickly or you’ll be stuck in Calculus next year!”*

Showing all your work, compute the following:

(a) $\int \frac{x^{7/2} + x - 1}{x} dx$

(b) $\int \sin^2 \theta d\theta$

9. (8 points) *Santa's Christmas looks ruined. This math is putting him in straits.
All these diagrams confuse him, he needs helping reading off his rates!*

Use the graph of the function below to answer the given questions.

- (a) Assuming that a **function** $f(x)$ was plotted, indicate whether the following are positive (> 0), negative (< 0), or equal to zero ($= 0$):

$$f''(-5) \quad \underline{\hspace{2cm}} \quad 0$$

$$f'(-3) \quad \underline{\hspace{2cm}} \quad 0$$

$$f''(0) \quad \underline{\hspace{2cm}} \quad 0$$

$$f'(3) \quad \underline{\hspace{2cm}} \quad 0$$

$$f'(5) \quad \underline{\hspace{2cm}} \quad 0$$

- (b) Assuming that a **derivative** $f'(x)$ was plotted, determine the following:

Interval(s) where $f(x)$ is decreasing:

x -values of any local maxima/minima for $f(x)$:

Interval(s) where $f(x)$ is concave up:

10. (8 points) *Though the elves did their best, their calculations gave Santa a fright,
He ho'd, "Bring help—these derivatives might ground us tonight!"*

Use the definition of the derivative to find $f'(x)$, where $f(x) = x^2 - 3x + 1$. You may check your answer using 'shortcut rules', but you *must* use the derivative definition for credit. You *may not* use l'Hôpital's rule. Be sure to show all your work.

11. (8 points) *He sped through the sky in his sleigh with such wobble and strain,
Santa laughed, "At this rate, I'm as safe as a budget Boeing plane!"*

Santa's sleigh velocity is given in the table below in increments of 2 seconds.

Time (s)	0	2	4	6	8	10
Velocity (mi/s)	0	0.5	1	2	2.5	5

Estimate the distance Santa's sleigh has traveled over this 10 second period as accurately as possible by using the time at the start of each time interval. Based on the data and explaining your reasoning, would you predict your estimate to be an underestimate or overestimate of the distance traveled?

12. (8 points) *Santa hurtled through the sky, the fate of Christmas so near,
But he shook with fear, the integrals were too tricky to handle this year!*

Showing all your work, compute the following integrals:

(a) $\int_{-2}^1 x^2 \sqrt{x^3 + 8} \, dx$

(b) $\int \frac{dx}{x \ln x}$

13. (8 points) *Santa's trajectory is not correct, "Someone help me!"*
"No one told me that I that couldn't use Chat-GPT!"

Find the equation of the tangent line to $x^3 + y^3 = 9xy$ at the point $(2, 4)$.

14. (8 points) *They'd delivered presents and joy, against the winter cold moon bright.*

Santa and his reindeer, no chance for relief, press on this Christmas night.

While Santa's sleigh rushes through the sky, a reindeer drops a Christmas 'surprise.' It strikes a frozen pond, creating a circular hole in the ice that is 4 ft across. The hole freezes back over such that its radius decreases at a constant rate of 0.5 ft/min. After 2 minutes, at what rate is the area of this hole changing? Include units in your answer.

15. (8 points) *With presents delivered and Christmas nearly in the clear;
Santa has one last task, and then you're done for this year!*

With Christmas over, Santa needs to create a pen to house his reindeer until next year. The rectangular pen will be built alongside his toy factory. One side will be against the factory while the other three sides will be made of electrified steel fencing. He has 120 ft of fencing available. What is the area of the largest pen that Santa can build? Show all your work and be sure to prove that this area is indeed a maximum.

*The night was set right and magic of Christmas came true.
Santa let out a sigh, these students really came through.
Each limit untangled, each rate made precise,
They restored all the magic that keeps Christmas nice.*

*And Santa called out as he rode through the night,
His voice full of cheer and his heart lifted light:
“Merry Christmas to all! But before I depart,
Never forget your Calculus—the math of the heart!”*
