

Check-In XX/XX. (True/False) XXXXXX

Solution. The statement is XXXX.

19 If $f(x)$ is a relation with $f(2) = 9$ and $f(7) = 9$, then $f(x)$ cannot be a function.

20 Every linear function must have a constant rate of change.

24 If $f(x) = x + 3$ and $g(x) = 5$, then $(f \circ g)(0) = 15$.

25 If the average rate of change for a function $f(x)$ on $[-1, 0]$ and $[0, 3]$ are both 5, then $f(x)$ must be linear.

26 The function $f(x) = 3(x + 5)^2 - 6$ is quadratic with vertex $(5, -6)$ and has a maximum possible output.

27 A quadratic function $f(x)$ has a y -intercept, two x -intercepts, and either a maximum or a minimum output.
